

INTEGRATED SOCIAL STUDIES IN ENGLISH

SEE THE WORLD

Thinking about people, society, and the planet — in English

영어로 배우는 통합사회 · CLIL 교재

1

Four Lenses, One World

세상을 보는 네 개의 렌즈

BOOK 1
GRADE 10 · UNIT 1

HOW THIS BOOK WORKS

Read, look, think, talk

이 책의 구성

Every lesson uses the same five moves. You do not have to understand every word: use the Word Bank, the Korean hints, and the pictures, and keep going.

 Reading core ideas in clear English	 Data Lab a chart or map to read
 Key Questions what each lens asks	 Check Up short written answers
 Language Focus patterns for social studies	 Talk About It speaking with a partner
 Project group investigation	 Review & Test unit summary and exam practice

Tip for learners. Social studies English repeats the same "thinking verbs" again and again: *examine, focus on, analyze, predict, evaluate, propose*. Circle them when you see them. By the end of the unit they will be yours.

FOUR LENSES, FOUR COLORS

TIME

시간적 관점 temporal perspective —
When? How did it change?

PLACE

공간적 관점 spatial perspective —
Where? How is it connected?

RULES

사회적 관점 social perspective — *Which structures and institutions?*

VALUES

윤리적 관점 ethical perspective — *Is it right? What should we do?*

ALL FOUR

통합적 관점 integrative perspective — *the whole picture*

UNIT MAP

- ✓ **Unit Summary · Unit Test · Answer Key**
pp. 19–22

BY THE END OF THIS UNIT, YOU CAN...

- ☐ explain the four perspectives on humans, society, and the environment, and say what each one asks;
- ☐ read a chart, a map, a law, and an argument, and name the lens each one uses;
- ☐ explain why an integrative perspective is necessary, and apply it to a real issue;
- ☐ use English patterns for describing change, location, cause and effect, and opinion.

WARM-UP

One cafeteria, four questions

같은 장면, 다른 질문

On Monday, a new sign appears in the school cafeteria. Four students look at the same sign — and ask four completely different questions.

**MINA**

"Last year we used plastic trays, and nobody said anything. When did this change start, and why *now*?"

JUN

"Where does the plastic actually go after lunch? Does our town even have a recycling center?"

SORA

"Who made this rule? Is it a school decision, or a law that every school in the country has to follow?"

TAE0

"Is it fair that we pay 300 won more to protect the environment? Is it the right thing to do anyway?"

Try it 활동

- 1** Match each student to a lens: **TIME**
- PLACE** **RULES** **VALUES**
- Mina → _____ Jun → _____
- Sora → _____ Taero → _____

- 2** Write one more question about the sign. Which lens does it use?
- 이 장면에 대한 질문을 하나 더 만들어 보자.
-
-

BIG IDEA

The same scene can be understood in different ways depending on the **perspective** we choose. A perspective is like a lens: it makes some things clear and leaves others out of focus. In this unit you will learn to use four lenses — and to put them together.

WORD BANK

perspective	관점	a way of looking at and thinking about something
phenomenon	현상	something that happens and can be observed (pl. phenomena)
society	사회	people living together under shared rules
environment	환경	the natural and built world around us
examine	살펴보다	to look at carefully in order to understand

LESSON 1

The Time Lens

시간적 관점 — 시간의 흐름 속에서 현상을 보기

Goal Explain what the temporal perspective is, and use it to read a change over time.

Every social phenomenon has a history. A cheap T-shirt, a crowded subway, an empty classroom in a small town — none of them appeared overnight. When we look at the world through the **time lens**, we ask how things came to be the way they are. This is what social scientists call the **temporal perspective** 시간적 관점: understanding a phenomenon by focusing on its historical background and the flow of time.

The time lens works in three directions. First, it looks *backward*, collecting facts and events from the past. Second, it connects the past to the present, so that we can explain why a problem exists today. Third, it looks *forward*: if a trend continues, what will the future look like? Because it links past, present, and future, the time lens helps us find causes and predict changes.

WORD BANK

temporal	시간의	related to time
historical background	역사적 배경	the events that came before
trend	추세	a general direction of change
predict	예측하다	to say what will happen
fertility rate	출산율	average births per woman
decline	감소	a decrease

Think first. Before you look at the chart below, guess: how many children did a Korean woman have on average in 1970? And today?

KEY QUESTIONS OF THE TIME LENS

- ? How has this phenomenon changed from the past to the present?
과거부터 현재까지 어떻게 변화해 왔는가?
- ? Why did the problem begin, and which past cases can help us solve it?
왜 발생했고, 참고할 과거 사례는 무엇인가?
- ? If this trend continues, how will our world change?
이 추세라면 세계는 어떻게 변할 것인가?

DATA LAB

Korea's total fertility rate, 1970–2023

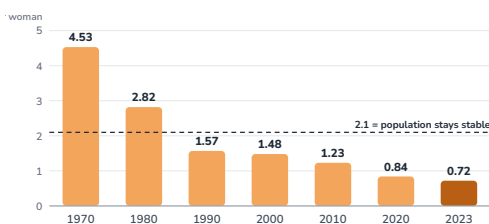

Figure 1.1 Total fertility rate = the average number of children a woman is expected to have in her lifetime. Source: Statistics Korea (values rounded).

Read the data

- In which decade did the rate fall the most? Circle it:
1970s · 1980s · 1990s · 2010s
- The dashed line marks 2.1. Why is this number important?
.....
.....
- Complete: "Since 1970, the rate **has fallen from** 4.5 to"

READING 2

Why are the classrooms getting emptier?

Look again at Figure 1.1. In 1970, a Korean woman had four or five children on average. By 1990 the number had dropped below two, and in 2023 it reached 0.72 — the lowest figure ever recorded in the world. Why does this matter to you? Fewer births in the past mean fewer classmates today, and fewer workers, soldiers, and taxpayers tomorrow.

The time lens shows that today's "low birth rate problem" did not begin last year. It is the result of changes that started more than fifty years ago: rapid movement from farms to cities, longer education, later marriage, and the rising cost of housing and raising children. Together, over half a century, these choices produced the chart on the previous page.

Seeing the whole trend helps us understand the present without blaming any single generation, and it lets us look ahead. If the trend continues, Korea's population will shrink, and every young person will support more older people. That prediction is exactly why the issue is urgent *now*, not later.

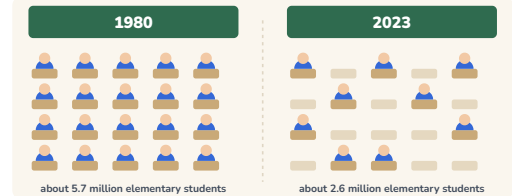

Figure 1.2 Then and now: the number of elementary school students in Korea fell by more than half between 1980 and 2023. Source: Korean Educational Statistics Service (rounded).

LANGUAGE FOCUS · TALKING ABOUT CHANGE OVER TIME

X **has risen / has fallen** from A to B.

By 1990, **X** **had dropped** below 2.

People **used to** have large families.

If this trend continues, **X** **will** shrink.

- *has fallen* = a change that continues to now (present perfect)
- *had dropped* = a change completed before a past point (past perfect)

CHECK UP

Show what you know 확인 문제

- Complete the definition: *The time lens examines a phenomenon by focusing on its _____ and the _____ of time.*
- Give **two** reasons from Reading 2 why the birth rate fell.
- Which sentence uses the time lens? Tick one.
 - ☐ Most births happen in large cities.
 - ☐ Family size has been shrinking since the 1970s.
 - ☐ The government should pay parents more.
- Prediction. Write one sentence about Korea in 2050. Use *will*.

Talk about it

Interview someone older than 40 — a parent, a teacher, a neighbor. Ask: "What was different about school when you were sixteen?" Report one change to your class using *used to*: "My aunt's class used to have fifty students."

LESSON 2

The Place Lens

공간적 관점 — 장소, 분포, 연결망 속에서 현상을 보기

Goal Explain what the spatial perspective is, and use a map to trace a global connection.

Where something happens is never an accident. Farms grow where the soil and the rain are good. Factories cluster near ports and cheap labor. Cafés open next to subway exits. The **place lens** — the **spatial perspective** 공간적 관점 — examines social phenomena by focusing on places, regions, and the interactions between them.

The place lens asks three kinds of questions. *Location*: where is it? *Distribution*: where is it concentrated, and where is it missing? *Movement and networks*: how do people, goods, money, and ideas travel from one place to another? "Space" here means both the **natural environment** — climate, mountains, rivers, resources — and the **human environment** that people have built: cities, roads, borders, and markets.

WORD BANK

spatial	공간의	related to space and place
distribution	분포	the way something is spread over an area
concentrated	집중된	gathered in one place
network	연결망	a system of connected places or people
resource	자원	a useful material such as water or metal
supply chain	공급망	the path from raw material to product

KEY QUESTIONS OF THE PLACE LENS

- ? What are the characteristics of the space we live in?
우리가 사는 공간의 특징은 무엇인가?
- ? How do natural and human environments make life different in each region?
환경에 따라 지역의 생활 모습은 어떻게 다른가?
- ? What causes a place to change, and how does that change affect people's lives?
공간 변화의 원인과 그 영향은 무엇인가?

Think first. Take out your phone (or imagine one). How many countries do you think it visited before it reached your hand?

DATA LAB

Where the metal comes from

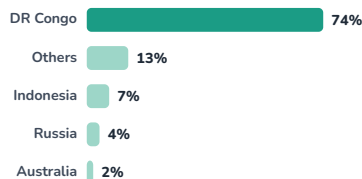

Figure 2.1 Share of the world's cobalt mined in each country, 2023 (approximate). Cobalt is a key metal in phone and car batteries. Source: U.S. Geological Survey, *Mineral Commodity Summaries 2024*.

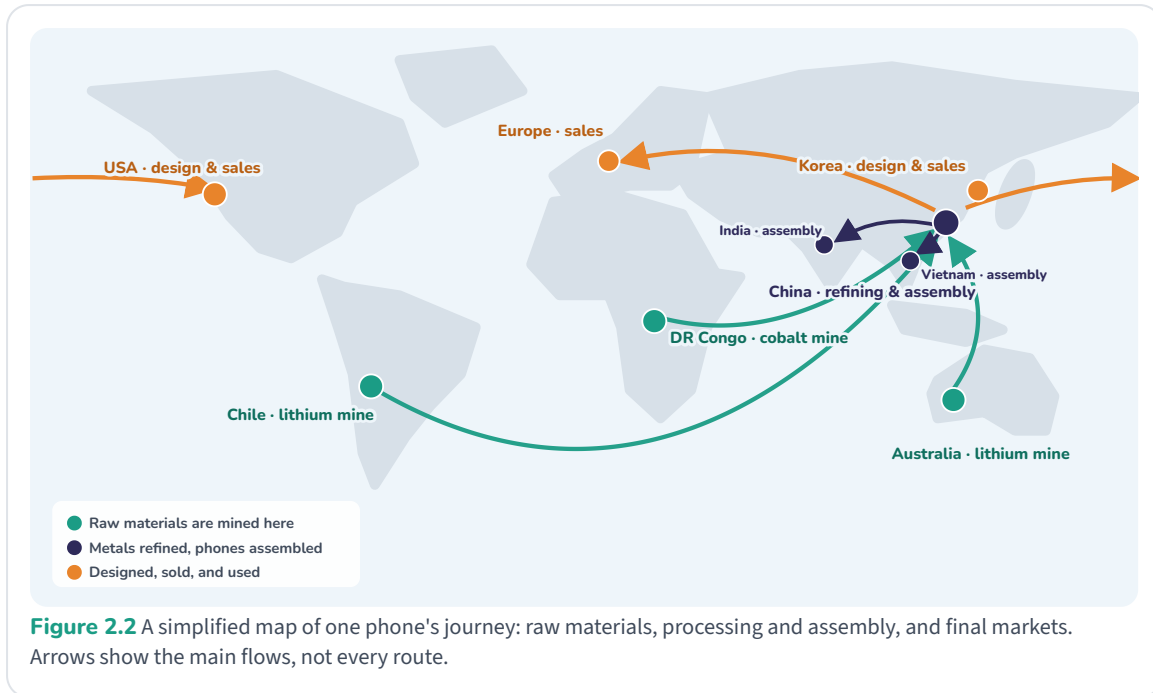

Read the data

- About _____ out of every ten tons of cobalt come from one country: _____
- Is cobalt production *evenly spread* or *concentrated*? Why might that be a problem for phone makers?

MAP LAB

The journey of a smartphone

A smartphone is a small map of the world. Its battery needs cobalt, and most of the world's cobalt is dug out of the ground in one country, the Democratic Republic of the Congo. Its lithium comes mainly from Australia and Chile. These metals are shipped to China, which refines them and assembles a large share of the world's phones; Vietnam and India are fast-growing assembly centers. The design, the brand, and most of the profit, however, stay in a few wealthy countries — including Korea and the United States.

When one link in this chain breaks — a mine closes, a border shuts, a government limits exports — prices rise everywhere. The place lens makes these hidden connections visible. It explains why a conflict in central Africa can change the price of a phone in Seoul.

LANGUAGE FOCUS · DESCRIBING LOCATION AND DISTRIBUTION

X is concentrated in a few regions.

Most of the world's X comes from Y.

X is shipped from A **to** B.

Seoul, where the phone is designed, ...

- Use *where* to add information about a place.
- *Most of the world's cobalt* takes a singular verb: *comes*.

CHECK UP

Show what you know 확인 문제

- Name the three kinds of spatial questions.
.....
- Using the map, complete: "Cobalt is mined in _____, refined in _____, and the phone is designed in _____."
- Which is part of the *human* environment? Tick one.
☐ a river ☐ a port ☐ a mountain
- Explain in one sentence why the place lens uses arrows, not just dots.
.....

Talk about it

Choose one object in your bag. In pairs, guess where its parts came from and draw its journey as a chain of arrows. Present it in three sentences: "The cotton comes from... It is sewn in... It is sold in..."

LESSON 3

The Rules Lens

사회적 관점 — 사회 구조와 제도 속에서 현상을 보기

Goal Explain what the social perspective is, and show how an institution can change people's lives.

People do not live alone. We are born into families, go to schools, work in companies, and vote in elections. These repeated patterns of relationships form a **social structure** 사회 구조: an organized framework that shapes how people relate to one another. Inside this structure are **social institutions** 사회 제도 — established rules, practices, and procedures, such as laws, schools, elections, and markets, that guide people's behavior in a certain direction.

The **rules lens** — the **social perspective** 사회적 관점 — studies a phenomenon by examining these structures and institutions. It looks for the problems inside the system and searches for solutions within the system: a new law, a better policy, a changed procedure. Individuals matter, of course. But the rules lens reminds us that many "personal" choices are shaped by the structures around us — and that changing a rule can change millions of lives at once.

WORD BANK

institution	제도	an established rule or organization
structure	구조	the way parts are organized
policy	정책	a plan of action by a government
amend	개정하다	to change a law
eligible	자격이 있는	allowed by the rules to do something
citizen	시민	a full member of a country

Think first. Name one rule that changed your life this year without you doing anything at all.

KEY QUESTIONS OF THE RULES LENS

- ? How do laws, institutions, and policies affect people's lives?
법·제도·정책은 삶에 어떤 영향을 주는가?
- ? How does social structure shape the way people think and act?
사회 구조는 사고와 행동에 어떤 영향을 주는가?
- ? What roles do government and citizens play in making policy?
정책 결정에서 정부와 시민의 역할은 무엇인가?

DATA LAB

Who is old enough to vote? Korea's voting age over time

- 1948** — First national election. Voting age: **21**.
- 1960** — Lowered to **20** after the April Revolution.
- 2005** — Lowered to **19**.
- December 2019** — The National Assembly amends the Public Official Election Act: voting age **18**.
- April 15, 2020** — About **530,000** eighteen-year-olds vote for the first time, many of them still in high school.

Figure 3.1 An institution changed: the same students, one year younger at the ballot box.

READING 2

Old enough to vote

In December 2019, the National Assembly changed the election law and lowered the voting age from 19 to 18. In April 2020, about 530,000 eighteen-year-olds voted for the first time. Nothing about these students had changed. The institution had.

The effects came quickly. Politicians suddenly had a reason to listen to teenagers. Schools began to teach about elections and political neutrality. Young people's opinions about tuition, housing, and the climate gained new weight, because those opinions could now become votes. The rules lens explains this change without looking at any single person: a law defined who counted as a full citizen, and changing that law changed people's lives.

The same lens also raises the next questions. Should 18-year-olds be allowed to run for office? Should political education be part of every school's curriculum? Who should decide — the government, the schools, or the students themselves? Each of these is a question about institutions, and each can be answered by changing them.

ANOTHER EXAMPLE · THE PLASTIC BAG RULE

From 2019, large stores in Korea were no longer allowed to give customers free single-use plastic bags. Within months, millions of shoppers were carrying their own bags. No campaign had changed their minds — a rule had changed their habits.

LANGUAGE FOCUS · RULES, CAUSES, AND EFFECTS

The law **requires / allows / bans** X.

Because of the new rule, people ...

The change **led to** a rise in ...

As a result, schools began to ...

- *require* = must do; *allow* = may do; *ban* = must not do
- *lead to* is followed by a noun: *led to a change*

CHECK UP

Show what you know 확인 문제

- 1 In your own words, what is the difference between a social *structure* and a social *institution*?

.....

.....

- 2 Which institution changed in 2019, and what was one effect?

.....

- 3 True or false? *The rules lens explains phenomena mainly through individual character.* T / F
Explain why in a few words:

.....

- 4 Think of one rule at your school. Who made it? Who has the power to change it?

.....

Talk about it · design a rule

In groups of three, propose **one** rule change for your school (uniforms, phones, lunch, study hours). Say (1) what the rule requires, (2) who it affects, and (3) one effect it would lead to. The class votes.

LESSON 4

The Values Lens

윤리적 관점 — 도덕적 가치와 규범으로 현상을 보기

Goal Explain what the ethical perspective is, and evaluate a phenomenon using moral values and norms.

Some questions cannot be answered with data alone. A chart can tell us how many animals are used in product tests every year. It cannot tell us whether that is acceptable. For questions like this we need the **values lens** — the **ethical perspective** 윤리적 관점. It interprets social phenomena through **moral values** 도덕적 가치, such as human dignity, freedom, fairness, and respect for life, and through **moral norms** 도덕규범 — the shared standards that tell us what we ought to do.

The values lens does two jobs. First, it *evaluates*: is this situation good or bad, fair or unfair, worthy of a human being or not? Second, it *proposes*: what would a good and responsible way of living look like, and in which direction should society move? Without this lens, a society can be rich, efficient, and well organized — and still be wrong.

WORD BANK

ethical	윤리적인	related to right and wrong
value	가치	a belief about what is important
norm	규범	a shared standard of behavior
dignity	존엄성	the worth every person has
evaluate	평가하다	to judge how good something is
welfare	복지, 안녕	health and well-being

Think first. "It's legal" and "it's right" — are they the same thing? Think of one example where they are different.

KEY QUESTIONS OF THE VALUES LENS

- ① Judged by moral values and norms, is the current situation desirable?
현재 상황은 도덕적으로 바람직한가?
- ② Which universal values or principles should guide the solution?
어떤 보편적 가치와 원칙으로 문제를 해결할 것인가?
- ③ When rights or interests conflict, which values should decide?
이해관계나 권리가 충돌할 때 필요한 가치는 무엇인가?

CASE

The rabbit and the lipstick

For decades, new cosmetics were tested on animals — for example, a substance was dropped into a rabbit's eye or rubbed onto its skin to see whether it caused irritation. Public opinion slowly changed. People argued that a new shade of lipstick was not worth an animal's suffering, and that companies could use alternatives such as artificial skin.

The European Union banned animal testing of cosmetics in 2013. In 2017, Korea amended its Cosmetics Act to ban the sale of cosmetics tested on animals, with limited exceptions. Today more than forty countries have similar rules.

Figure 4.1 A value ("respect for life") became a norm ("don't test beauty products on animals") and then a law.

READING 2

Values first, rules second

Notice the order of events in the cosmetics case. First came a moral judgment: *causing pain to an animal for a lipstick is wrong*. Then came a norm that more and more people shared: *beauty products should not be tested on animals*. Only at the end came a rule — a law with a date and a penalty. The values lens often works this way. Values change first, and institutions follow.

But ethical questions are rarely simple. Is a test still wrong if it might save human lives, as in medicine? Who decides which value comes first when two of them conflict — the freedom of a business, or the welfare of an animal? Is it fair to ban a practice in Korea while buying products from countries that still allow it?

The values lens does not give easy answers. What it gives us is a way to argue about hard questions with reasons, not just feelings: naming the values at stake, weighing them, and proposing a direction that we could defend in front of anyone.

THREE STEPS OF A MORAL CHANGE

- ① **Value** — respect for life
가치
- ② **Norm** — "products should not be tested on animals"
규범
- ③ **Rule** — Cosmetics Act amended, 2017
제도

LANGUAGE FOCUS · GIVING AN OPINION WITH REASONS

I believe (that) X should / should not ...

It is (un)fair / (un)acceptable to ...

Even if it is legal, ...

Every person has a right to ...

- *should* = it is right to; *ought to* is more formal
- Give the value: "... , *because* every living thing deserves respect."

CHECK UP

Show what you know 확인 문제

- 1 What is the difference between a moral *value* and a moral *norm*? Give one example of each.
.....
.....
- 2 Which two values conflict in the animal-testing debate?
.....
- 3 Which sentence uses the values lens? Tick one.
☐ The ban began in 2017.
☐ Most tests were done in three countries.
☐ Animals have a right not to suffer for beauty.
- 4 Your view: Should animal testing be allowed for *medicines*? Write two sentences with *should*.
.....
.....

Talk about it · value line

Draw a line on the floor from **AGREE** to **DISAGREE**. Stand where you belong for this sentence: "*A cheap product is worth more than a perfect ethics.*" Explain your position to a neighbor using *I believe... because...*

LENS CHECK

Four lenses at a glance

네 가지 관점 정리

**Time** 시간적**When? How did it change?**

Focuses on historical background and the flow of time. Links past, present, and future to find causes and predict change.

**Place** 공간적**Where? How is it connected?**

Focuses on location, distribution, movement, and networks, in both the natural and the human environment.

**Rules** 사회적**Which structures? Which institutions?**

Focuses on social structure, institutions, and policy. Finds problems in the system and solutions within it.

**Values** 윤리적**Is it right? What should we do?**

Evaluates phenomena by moral values and norms, and proposes a desirable direction for society.

ACTIVITY

Which lens is it? 어떤 관점일까?

Each sentence below is about **coffee**. Write **T** (time), **P** (place), **R** (rules), or **V** (values) in the box.

- a** Coffee consumption in Korea has roughly tripled since 2000. _____
- b** Most coffee beans are grown near the equator, but most coffee is drunk in rich countries. _____
- c** A new rule requires cafés to charge a deposit on disposable cups. _____
- d** Is it fair that a farmer earns less than one percent of the price of a latte? _____
- e** Cafés cluster near subway stations and universities because customers walk there. _____
- f** If the trend continues, Korea will have more cafés than convenience stores. _____
- g** Café owners' associations are asking the government to change the minimum wage. _____
- h** Companies ought to pay farmers a price that lets them live with dignity. _____

Speaking · four questions in a row

Pick one topic: **school uniforms** · **K-pop** · **food delivery** · **e-scooters**. In pairs, ask one question with each lens. Your partner answers in one sentence.

Lens	Your question
Time	
Place	
Rules	
Values	

SELF-CHECK

- ☐ I can name the four lenses in English and Korean.
- ☐ I can say what each lens focuses on.
- ☐ I can read a sentence and identify its lens.
- ☐ I can ask a question with each lens.

Looking ahead. Did you notice that no single lens could explain coffee by itself? That is the subject of Lesson 5.

LESSON 5

The Integrative Lens

통합적 관점 — 네 관점을 하나로 모아 세상을 보기

Goal Explain what the integrative perspective is and why it is necessary for understanding complex phenomena.

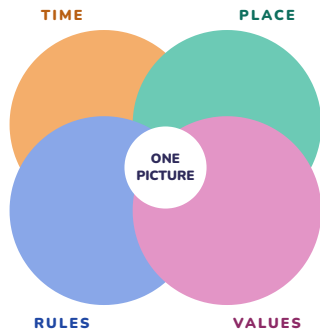

Figure 5.1 Each lens shows part of the picture. Only together do they show the whole.

Each lens shows something real, and each lens misses something. The time lens explains how a problem grew, but not where it hurts most. The place lens maps the problem, but not who is responsible. The rules lens finds the institutions, but not whether they are just. The values lens judges, but cannot, by itself, measure.

Modern problems — climate change, an aging population, artificial intelligence — are complex and uncertain because many factors interact across time and space. With only one lens, we may solve the wrong problem, or the right problem in the wrong way.

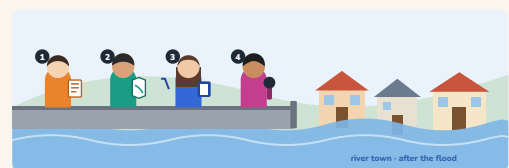

The **integrative perspective** 통합적 관점 means examining humans, society, and the environment by considering all four together: historical background, spatial context, the influence of structures and institutions, and the direction given by moral values. It crosses the borders between subjects — history, geography, politics, ethics — to understand a phenomenon as a whole. That is why this subject is called *Integrated Social Studies*.

The Four Reporters

A heavy rain flooded the old part of a river town. Four reporters went to cover the story. The first checked the records. "The river has flooded five times in twenty years," she wrote, "and each flood was worse than the last." The second walked the streets with a map. "Only the low neighborhoods near the river went under water," he reported. "The new apartments on the hill stayed dry."

The third went to city hall. "A flood wall was planned in 2015," she found, "but the budget was cut, and no law forced the city to build it." The fourth talked to the families. "The people who lost their homes are the poorest in town," he wrote. "Is it right that those with the least always suffer the most?"

That evening the editor read all four stories. "Each of you is right," she said, "and each of you is only a quarter right. Put them together, and we will finally understand this flood — and maybe prevent the next one."

1 Match each reporter to a lens.

1 → _____ 2 → _____
3 → _____ 4 → _____

2 What could the town do if it listened to all four reporters? Write one idea.

.....
.....

3 Rewrite the editor's last sentence in your own words.

.....
.....

CASE STUDY · APPLYING THE INTEGRATIVE LENS

A T-shirt for the price of a coffee

패스트패션을 네 가지 관점으로 탐구하기

A "fast fashion" T-shirt can cost less than a cup of coffee. Cheap, fun, and everywhere — so what is the problem? Let's put all four lenses on one everyday phenomenon.

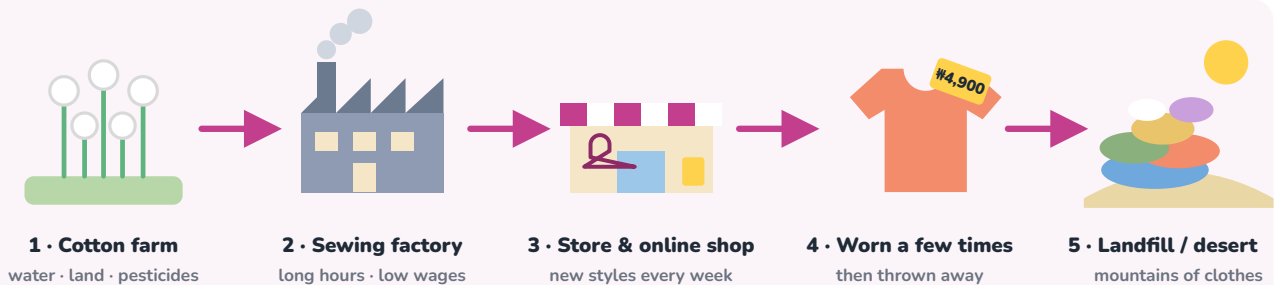

Figure 6.1 The life of a fast-fashion T-shirt, from field to desert.

TIME LENS**How did it grow?**

"Fast fashion" — cheap clothes in quickly changing styles — began in the 1990s and exploded with online shopping in the 2010s. Between 2000 and 2014 the amount of clothing produced in the world roughly **doubled**, while the number of times each item was worn before being thrown away fell by about a third.

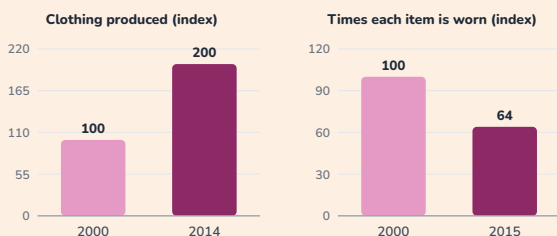

Figure 6.2 Two indexes (2000 = 100). Sources: McKinsey & Company (2016); Ellen MacArthur Foundation (2017).

PLACE LENS**Where is it made, worn, and dumped?**

Fast fashion is a global network. Clothes are designed in Europe, the United States, and Korea; sewn mostly in Bangladesh, Vietnam, Cambodia, and China; and worn everywhere. When they are thrown away, many are shipped abroad again. Reporters have photographed mountains of discarded clothing in Chile's Atacama Desert and in the markets of Accra, Ghana — thousands of kilometers from the closets they came from.

The place lens shows an unequal map: the benefits (cheap clothes, brand profits) and the costs (low wages, pollution, waste) fall on very different places.

WORD BANK · CASE STUDY

garment	의류	a piece of clothing
discard	버리다	to throw away
textile	직물, 섬유	cloth; the cloth industry
index	지수	a number that shows change from a base year

binding	구속력 있는	must be obeyed by law
inspection	점검	an official check
moderation	절제	not too much of anything
fraction	일부, 비율	a small part of the whole

RULES LENS

Which institutions shape it?

On April 24, 2013, the Rana Plaza factory building in Bangladesh collapsed, killing more than 1,100 garment workers. Cracks had been reported the day before, but workers were ordered back inside. After the disaster, global brands signed a legally binding building-safety agreement, and inspections became routine.

Governments are acting, too. France banned companies from destroying unsold clothing (in force since 2022), and the European Union announced a strategy to make textiles last longer and be easier to recycle. Rules like these change what companies find profitable.

VALUES LENS

Is it right?

Is it fair that a worker who sews a shirt earns a tiny fraction of its price? Do we owe anything to the people who will live with our waste for centuries? Is "I can afford it" a good enough reason to buy it?

Values such as **fairness**, the **dignity of labor**, and **moderation** lead many people to a different norm: buy less, buy better, wear longer. Whether that norm becomes a rule is a question for the whole society.

PUTTING IT TOGETHER

Seen through all four lenses, fast fashion is not just a shopping habit. It is a thirty-year trend **TIME**, a global network of unequal places **PLACE**, a system of rules that can be rewritten **RULES**, and a moral question about fairness and responsibility **VALUES**. A response that uses only one lens — for example, only telling shoppers to feel guilty — will fail. An integrative response combines better rules, fairer trade, and changed habits.

CHECK UP

Show what you know 확인 문제

- Which lens does Figure 6.2 belong to? Why?
.....
- Name two places where discarded clothes end up.
.....
.....
- What changed after 2013, and which lens explains it?
.....
.....
- Write a three-sentence opinion: *Should schools teach about fast fashion?* Use *I believe*, *because*, and *should*.
.....
.....
.....

Talk about it

Check the label of something you are wearing. Where was it made? In pairs, put your two items on the map in Figure 2.2 and describe their journeys in English.

Go further. Open the "sustainability" page of one clothing brand you like. Which lens does the brand use to describe itself — time, place, rules, or values? Which lens is missing? Report in three sentences.

PROJECT · GROUP INVESTIGATION

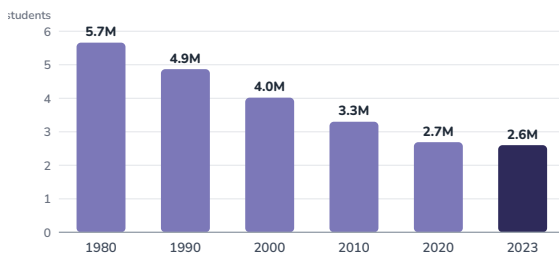

Empty desks: why are schools closing?

폐교 현상을 통합적 관점으로 탐구하기

Since 1982, more than **3,900 schools** in Korea have closed, most of them in rural areas. In some villages the school was the last public building left. Investigate this phenomenon with all four lenses and propose a response.

How it works. Form groups of four. Each member takes one lens and one data set (1–4). Analyze it, then combine your findings on the next page.

**DATA 1 · TIME**

Elementary school students in Korea, in millions. Source: Korean Educational Statistics Service (rounded).

DATA 2 · PLACE

Province	Closed schools (approx.)
Jeollanam-do	about 830
Gyeongsangbuk-do	about 730
Gyeongsangnam-do	about 580
Gangwon-do	about 460
Seoul	fewer than 10

Cumulative closures since 1982. Source: Ministry of Education data as reported in 2023 (rounded).

DATA 3 · RULES

In 2016 the Ministry of Education recommended that local education offices *consider* closing or merging a rural school with **fewer than 60 students** (120 in towns, 240 in cities). The decision belongs to each provincial office, which must consult residents.

Meanwhile, some counties offer free housing or cash to families who move in with children, and some closed schools have been turned into camps, museums, and community centers.

DATA 4 · VALUES

Two voices (example opinions for discussion)

A STUDENT, 14

"My school closed last year. Now I ride a bus for forty minutes each way. Don't I have the same right to a school as a kid in Seoul?"

A TAXPAYER, 52

"A school with eight students costs about a billion won a year. Is it right to spend that money there, when city schools are overcrowded?"

STEP 1 Analyze your data set 자료 분석

Lens	Guiding question	Our analysis (one or two sentences)
Time	How has the number of students changed? What will happen if the trend continues?	<i>Example:</i> The number of elementary students has fallen from about 5.7 million in 1980 to about 2.6 million in 2023. If this trend continues, more rural schools will lose their last students.
Place	Where are closures concentrated? Why there and not in Seoul?	
Rules	Which rule decides a school's fate? Who makes the decision, and who is consulted?	
Values	Which values conflict here — equality, the right to education, efficiency? Which should come first?	

STEP 2 Combine and propose 통합하여 대안 제시

Read all four analyses together. Then agree on **one policy response** (a rule) and **one change in values** (a norm) that your group would recommend.

Our proposal

SENTENCE FRAMES

- Our time analysis shows that ... / Our map shows that ...
- The current rule ... ; we propose that the government *should* ...
- We believe ... *because* every child *has a right to* ...
- *Taken together*, the four lenses suggest that ...

STEP 3 Present and evaluate 발표와 상호 평가

Present for two minutes. While listening to another group, score them 1–3 on each line.

Criterion	1	2	3
Used all four lenses, not just one or two	☐	☐	☐
Analysis is based on the data , not only on opinions	☐	☐	☐
Proposal combines a rule and a value	☐	☐	☐
English is clear; key terms are used correctly	☐	☐	☐

THINK TOGETHER · DEBATE

The midnight game ban

게임 셧다운제를 네 가지 관점으로 토론허기

From 2011 to 2021, Korea had a "shutdown law." Under this rule, children under sixteen could not log in to online games between midnight and six in the morning. Lawmakers and many parents said it protected sleep, health, and study. Young people and game companies argued that it was ineffective and unfair: it did not apply to mobile games, teenagers borrowed their parents' accounts, and it treated all families the same.

In 2022 the law was abolished. Families may now set their own limits through a "game-time choice" system. The debate did not end, however. Around the world, the same questions are now being asked about smartphones and social media — in 2024, for example, Australia passed a law setting a minimum age of sixteen for social media accounts.

Figure 7.1 Ten years, one rule, and a question that is still open.

STEP 1 Ask with four lenses**Time**

Why did the law appear in 2011, and why was it abolished ten years later? What had changed?

Place

Which countries limit screen time by law, and which leave it to families? Does it depend on where you live?

Rules

Who should decide a teenager's screen time: the state, the platform, the school, or the family?

Values

Which value comes first: a young person's freedom, or protection from harm? Who gets to say?

STEP 2 Debate**MOTION**

"The government should set a legal minimum age for social media."

Team A argues **for**, Team B **against**. Each team must use at least **two different lenses** in its argument. Judges award one point for every lens used well.

USEFUL LANGUAGE

- *Historically, ... / Ten years ago, ...* (time)
- *In countries where ..., ...* (place)
- *The law would require / allow / ban ...* (rules)
- *Even if it is effective, it is unfair to ...* (values)
- *Taking all of this into account, we believe ...* (integrative)

UNIT SUMMARY · FILL IN THE BLANKS

Four lenses, one world

빈칸을 채우며 정리하기

Time lens 시간적 관점	Examines a phenomenon by focusing on its _____ ① _____ background and the flow of time. Collects facts from the past, links past and present, and _____ ② _____ future change.
Place lens 공간적 관점	Focuses on places, regions, and spatial interaction — location, _____ ③ _____, movement, and networks — in both the natural and the human environment.
Rules lens 사회적 관점	Examines social _____ ④ _____ and social institutions such as laws and policies; identifies problems in the system and seeks solutions within it.
Values lens 윤리적 관점	Interprets phenomena through moral values and moral _____ ⑤ _____; evaluates whether a situation is desirable and proposes a good direction for society.
Integrative lens 통합적 관점	Considers all four together to understand humans, society, and the environment as a _____ ⑥ _____. Necessary because modern phenomena are _____ ⑦ _____ and uncertain, and one lens alone may miss important aspects.

KEY TERMS

Glossary 핵심 용어

perspective	관점	a way of looking at something	distribution	분포	how something is spread over space
temporal perspective	시간적 관점	the time lens	network	연결망	connected places or people
spatial perspective	공간적 관점	the place lens	social structure	사회 구조	the organized pattern of relationships
social perspective	사회적 관점	the rules lens	social institution	사회 제도	established rules and procedures
ethical perspective	윤리적 관점	the values lens	policy	정책	a government's plan of action
integrative perspective	통합적 관점	all four lenses combined	moral value	도덕적 가치	what a society believes is important
phenomenon	현상	an observable event or situation	moral norm	도덕규범	a shared standard of right behavior
trend	추세	a general direction of change	dignity	존엄성	the worth of every human being

.....

.....

2 One question I still have about this unit:

.....

.....

UNIT TEST · MULTIPLE CHOICE

Show what you know

대단원 평가

1 Which pairs correctly match a description with a lens? Choose the best answer.

DESCRIPTIONS

- a. Looks at how a phenomenon has changed from past to present.
- b. Looks at structures and institutions such as laws and policies.
- c. Looks at location, distribution, and networks.
- d. Judges a situation by moral values and norms.

- ① a – time, b – place, c – rules, d – values
- ② a – time, b – rules, c – place, d – values
- ③ a – place, b – rules, c – time, d – values
- ④ a – time, b – values, c – place, d – rules
- ⑤ a – rules, b – time, c – place, d – values

2 Read the passage. Which lens is the writer **mainly** using?

Food delivery apps became popular in Korea around 2015 and exploded during the pandemic. Delivery riders are paid per order, so many drive fast and work long hours. In 2021, the government introduced a law on the safety of delivery workers, requiring insurance and rest rules. Since then, the number of serious accidents has begun to fall.

- ① Time lens – it describes when delivery apps appeared.
- ② Place lens – it shows where riders work.
- ③ Rules lens – it explains how a law changed riders' conditions.
- ④ Values lens – it judges whether riders are treated fairly.
- ⑤ No lens – it only lists facts.

3 Students are investigating **school uniforms**. Which questions are correctly matched with their lens? Choose all that are correct.

QUESTIONS

- a. Time: "When did Korean schools begin to require uniforms, and how have the designs changed?"
- b. Place: "Which school rule allows students to choose between a skirt and trousers?"
- c. Rules: "Who has the authority to change the uniform policy — the principal, the school council, or the education office?"
- d. Values: "Is it fair to make every student pay for a uniform they did not choose?"

- ① a, b ② a, c ③ b, d ④ a, c, d ⑤ b, c, d

4 A teacher says: "Investigate **human rights** using the lens that focuses on *places, regions, and spatial interaction*." Which student answered most appropriately?

- ① Gap: "I will trace how the idea of human rights has developed since the 18th century."
- ② Eul: "I will study how the Constitution and the courts protect human rights."
- ③ Byeong: "I will compare regions where human rights violations are frequent and ask why they cluster there."
- ④ Jeong: "I will find the institutions that help victims of human rights violations."
- ⑤ Mu: "I will ask which moral principles we should use to judge a violation."

5 Which statement best completes the passage?

Four reporters covered the same flood. One studied the records, one walked the streets with a map, one visited city hall, and one interviewed the poorest families. Each story was true, and each was incomplete. The editor concluded that, to understand a complex event, **(A)**.

- ① we need a comprehensive analysis that combines several perspectives
- ② we should trust the reporter with the most experience
- ③ one expert perspective is more reliable than many ordinary ones
- ④ each subject should stay strictly within its own boundaries
- ⑤ moral judgments should be left out of news reports

6 Which statement about the **integrative perspective** is **NOT** correct?

- ① It considers historical background, spatial context, institutions, and moral values together.
- ② It is needed because modern social phenomena are complex and uncertain.
- ③ It helps us find more fundamental solutions to social problems.
- ④ It replaces the four individual lenses, which are no longer needed.
- ⑤ It crosses the boundaries between individual academic subjects.

WRITTEN RESPONSE**Short answers 서술형**

- 9** Explain in two or three sentences why the integrative perspective is necessary for studying social phenomena.

.....

.....

.....

.....

7 The sentence below is about **e-scooters**. Which lens does it use, and what is the key word that shows it?

"Because the 2021 law requires a driver's license for e-scooters, the number of teenage riders dropped sharply."

- ① Time lens – "dropped"
- ② Place lens – "riders"
- ③ Rules lens – "law requires"
- ④ Values lens – "teenage"
- ⑤ Integrative lens – "because"

8 Which question about the **aging population** would a student using the **values lens** most likely ask?

- ① How has the share of people over 65 changed since 1970?
- ② In which provinces is the share of older people highest?
- ③ Which pension rules decide how much support older people receive?
- ④ What do younger generations owe to older generations, and what is a fair share?
- ⑤ How many nursing homes will be needed in 2040?

- 10** Choose one phenomenon — for example, *the global success of K-pop* — and write one question for each of the four lenses.

ANSWER KEY & TEACHER'S NOTES

Answers

정답과 해설

Warm-up (p. 3)

1 Mina – Time; Jun – Place; Sora – Rules; Taeo – Values. **2** Open; accept any question and check the lens is named.

Lesson 1 (pp. 4–5)

Read the data 1 the 1970s (4.53 → 2.82). 2 About 2.1 births per woman keeps a population the same size; below it, the population eventually shrinks. 3 has fallen from 4.5 to 0.72.

Check Up 1 historical background; flow. 2 Any two: movement to cities, longer education, later marriage, cost of housing and children. 3 "Family size has been shrinking since the 1970s." 4 Open; must use *will*.

Lesson 2 (pp. 6–7)

Read the data 1 seven; the Democratic Republic of the Congo. 2 Concentrated; if that one country limits exports, phone makers everywhere face shortages and higher prices.

Check Up 1 Location, distribution, movement/networks. 2 DR Congo; China; Korea (or the USA). 3 a port. 4 Arrows show movement and networks between places, not only where things are.

Lesson 3 (pp. 8–9)

Check Up 1 Structure = the overall pattern of relationships; institution = a specific established rule or practice inside it (e.g., an election law). 2 The election law (voting age 19 → 18); e.g., politicians began to listen to teenagers / schools taught about elections. 3 False — it explains through structures and institutions. 4 Open.

Lesson 4 (pp. 10–11)

Check Up 1 A value is what we believe is important (respect for life); a norm is a shared standard of behavior based on it ("don't test cosmetics on animals"). 2 Freedom of business / human benefit vs. animal welfare (respect for life). 3 "Animals have a right not to suffer for beauty." 4 Open; two sentences with *should*.

Lens Check (p. 12)

a T · b P · c R · d V · e P · f T · g R · h V.

Lesson 5 (p. 13)

1 1 – Time; 2 – Place; 3 – Rules; 4 – Values. **2** e.g., build the flood wall (rules), protect the low neighborhoods first (place + values), plan for worse floods (time). **3** Open.

Case Study (pp. 14–15)

1 Time lens — it shows change between 2000 and 2014/2015. **2** Chile's Atacama Desert; markets in Accra, Ghana. **3** Brands signed a building-safety agreement and inspections became routine; the rules lens. **4** Open.

Unit Summary (p. 19)

① historical ② predicts ③ distribution ④ structure ⑤ norms ⑥ whole ⑦ complex.

Unit Test (pp. 20–21)

1 ② **2** ③ — the passage centers on a law and its effect on working conditions. **3** ④ — (b) is a rules question, not a place question. **4** ③ **5** ① **6** ④ — the integrative lens *combines* the four lenses; it does not replace them. **7** ③ **8** ④

9 Model answer: Modern social phenomena are complex and uncertain because many factors interact across time and space. One lens shows only part of the picture and may miss important aspects. By combining the temporal, spatial, social, and ethical perspectives we can understand a phenomenon as a whole and find more fundamental solutions.

10 Model (K-pop): Time – How has K-pop's popularity grown since the 1990s? Place – In which regions is it most popular, and how does it spread online? Rules – Which policies and industry systems supported it? Values – Is the training system fair to young performers?

Notes for teachers

- The four "lens" names are learner-friendly labels for the curriculum terms *temporal*, *spatial*, *social*, and *ethical perspective*; students should be able to use both sets of terms.
- Data figures are rounded public statistics; encourage students to check the latest values.
- The debate (p. 18) works best after the Case Study; require two lenses per team so that arguments do not collapse into pure opinion.
